

MAINTENANCE CASE FILE

PART 3 — EXECUTION & CLOSURE

Activity 05 — Maintaining Your Own System · Day 3

Expediente de mantenimiento — Parte 3: ejecución y cierre

Student / Estudiante	Valeria Patricia Contreras Miranda Marjory Lisbeth Lima Lima Tatiana Lissett Menéndez Mercado Alisson Jazmín Peña Cortez
System / Sistema	Entre Estrellas
New version / Versión nueva	v1.1
Window / Ventana	08:00 AM — 08:45 AM
Total downtime / Indisponibilidad	15 minutes
Teacher / Docente	Ing. Javier Arturo García Mineros

1. Maintenance log

2.

1. Bitácora de mantenimiento

#	TIME	CR	WHAT WAS DONE	TOOL / SCRIPT	EXACT RESULT OR MESSAGE
1	08:00	—	Fresh backup of code (.zip) and database (.bak) taken before starting	Windows Explorer + SSMS BACKUP DATABASE	EntreEstrellas_2026-08-09.bak
2	08:08	CR-01	Restricted guardar_producto.php and eliminar_producto.php to requerirRol(['Administrador']); set \$puedeEditar in inventario.php to Administrator-only	Text editor, XAMPP local server	0 errors, Cashier UI now shows only Activate/Deactivate

3	08:18	CR-02	Translated all visible strings across public/, modulos/ and includes/sidebar.php from Spanish to English	Text editor, browser	15 files edited, 0 broken selectors found on first pass"
4	08:26	CR-03	Added the auto-cancel UPDATE for kiosk orders pending more than 20 minutes in ventas_pos.php	Text editor, SSMS to simulate an old timestamp	Test order cancelled correctly after simulated 21-minute wait"
5	08:32	CR-04	Added unlink() cleanup of the previous product image in guardar_producto.php	Text editor	Old file removed on second image upload, confirmed in uploads folder"
6	08:37	—	Applied the database structural change: added modificado_por and fecha_modificacion to inventario_productos	SSMS, ALTER TABLE script from Part 2 §5	Script executed, 0 errors, existing rows show NULL as expected"

2. Test results

2. Resultados de las pruebas

ID	TYPE	WHAT WAS TESTED	ACTUAL RESULT	PASS / FAIL	DECISION TAKEN
TC-01	Change	Cashier cannot edit/delete a product	Cashier redirected upon direct file access; no Edit/New Product buttons visible	PASS	Keep change in deployment
TC-02	Change	Administrator can still fully manage products	Create, edit, and deactivate actions completed successfully	PASS	Keep change in deployment
TC-03	Change	UI text is in English	All interface labels rendered in English, except national ID format (DUI)	PASS	Keep change in deployment

TC-04	Regression	Login still works	Administrator, Cashier, and Warehouse roles login correctly to their panels	PASS	Proceed with deployment
TC-05	Regression	Sales flow (POS) still works	Sale processed, stock updated automatically, ticket printed correctly	PASS	Proceed with deployment
TC-06	Regression	Kiosk flow still works	Order submitted from kiosk appears instantly as Pending in POS	PASS	Proceed with deployment
TC-07	Regression	Existing data intact	SELECT COUNT(*) FROM dbo.detalle_ventas; matches baseline plus today's test records	PASS	Proceed with deployment
TC-08	Regression	Warehouse role still works	Inventory viewing and Supplier modules load without errors	PASS	Proceed with deployment

3. Deployment record

3. Registro de puesta en producción

STEP	TIME	RESULT	OBSERVATIONS
Users notified	07:55	SUCCESS	Notification message sent as drafted in Part 2 §7.1
Database exported before deploying	08:00	SUCCESS	Fresh .bak generated (entre_estrellas_20260904_predeploy.bak)
Database script applied	08:37	SUCCESS	ALTER TABLE script executed against the live system database
Code updated / published	08:40	SUCCESS	Only modified PHP files copied to htdocs/entre_estrellas
Version number updated	08:41	SUCCESS	Updated version tags in footer and README to v1.1

Smoke test	08:42	SUCCESS	Checked login, main panel, product edit restriction, and POS transaction
System announced as available	08:45	SUCCESS	Mensaje de cierre de ventana

3.1 Rollback

No rollback was needed. All change and regression tests passed in the development copy before deployment, and the smoke test on the real copy confirmed that login, the sales flow, and the main reports worked correctly after the update.

No fue necesaria ninguna reversión. Todas las pruebas de cambio y regresión pasaron en la copia de desarrollo antes del despliegue, y la prueba de humo en la copia real confirmó que el login, el flujo de ventas y el reporte principal funcionaron correctamente tras la actualización.)

4. Before and after

4. Comparativo antes y después

METRIC	BEFORE	AFTER	DIFFERENCE	INTERPRETATION (ENGLISH)
Load time of heaviest screen	1.8 s	1.8 s	0.0 s	Unchanged: no changes were made to rendering queries.
Time of slowest query/repor	2.5 s	2.5 s	0.0 s	Unchanged: performance-focused indexing was deferred.
Database size	14.2 MB	14.2 MB	+0.02 MB	Expected slight increase due to schema modification.
AFTER Difference Interpretation (English) Load time of heaviest screen. Expected to be nearly unchanged: the new columns hold no data yet. Records in main table	150	152	+2	Increased only by the transactions generated during testing.

Known open defects	2 (F-01, F-06)	0	-2	The two corrective findings were resolved by CR-01 and CR-03.
Repeated errors in the log	0	0	0	No new errors were registered in Apache/PHP logs.
Active users	5	5	0	User base remained constant during maintenance.
Date of last backup before today	2026-09-01	2026-09-04	+3 days	Backup discipline updated with today's execution.

4.1 What did not improve

The load time of the heaviest screen (Ventas/POS) and the execution time of the main report did not improve during this cycle. This is because CR-01 through CR-04 focused on permissions, localization, and data hygiene rather than query optimization. A performance-focused maintenance cycle targeting indexing (F-08) will be required to reduce load times.

El tiempo de carga de la pantalla más pesada (Ventas/POS) y el tiempo de ejecución del reporte principal no mejoraron durante este ciclo. Esto se debe a que de la CR-01 a la CR-04 se enfocaron en permisos, localización y limpieza de datos, en lugar de la optimización de consultas. Se requerirá un ciclo de mantenimiento enfocado en el rendimiento que aborde la creación de índices (F-08) para reducir los tiempos de carga.

5. Release notes

Version 1.1 of Entre Estrellas brings a fully English interface across every screen, so all staff can use the system without needing Spanish. Cashiers will notice they can no longer create, edit or delete a product — only an Administrator can now manage the product catalog; Cashiers can still switch a product between Active and Inactive from the same screen as before. Orders placed at the self-service kiosk that nobody attends within 20 minutes are now automatically cancelled instead of

staying in the cashier's queue forever. Nothing else changes: logging in, making a sale, and all previously saved data work exactly as before.

La versión 1.1 de Entre Estrellas trae la interfaz completa en inglés en todas las pantallas, para que todo el personal pueda usar el sistema sin necesitar español. Los Cajeros notarán que ya no pueden crear, editar ni borrar un producto — solo un Administrador puede ahora gestionar el catálogo; los Cajeros siguen pudiendo activar o desactivar un producto desde la misma pantalla de antes. Los pedidos hechos en el kiosk de autoservicio que nadie atiende en 20 minutos ahora se cancelan automáticamente en vez de quedarse para siempre en la fila del cajero. Todo lo demás sigue igual: iniciar sesión, hacer una venta, y todos los datos guardados anteriormente funcionan exactamente como antes.

6. Documentation updated

6. Documentación actualizada

DOCUMENT	UPDATED? (YES / NO)	WHAT CHANGED IN IT
README / installation guide	Yes	Added a changelog entry for v1.1: Cashier permissions restricted, UI translated to English, kiosk order expiration, orphaned-image cleanup. Version number updated from v1.0 to v1.1.
Database schema diagram	Yes	Updated inventario_productos entity to reflect modificado_por and fecha_modificacion columns.
User manual or instructions	No	N/A — Separate end-user manual is not yet created for this project.
Changelog	Yes	Added section detailing changes in v1.1 (CR-01, CR-02, CR-03, CR-04).

7. Next maintenance

7. Próximo mantenimiento

DEFERRED FINDING OR PREVENTIVE TASK	FREQUENCY OR DATE	RESPONSIBLE	WHY THEN AND NOT NOW
F-04 / CR-05 — Automated nightly backup job (SQL Server Agent)	Mon 14 Sep	Development team	High effort; needs its own dedicated block instead of competing with this week's 4 approved changes.
F-02 — Initialize Git version control for the project	Mon 14 Sep	Development team	Process fix, not code — quick, but deliberately not mixed with a live deployment day.
F-07 — Add an automated test suite for critical logic (stock deduction, login)	Mon 21 Sep	Development team	Needs a testing framework set up first; does not fit a 45-minute block.
F-08 — Add pagination to Reports and Inventory tables	When detalle_ventas passes ~500 rows	Development team	Not urgent yet — only 150 rows recorded as of today's baseline; revisit once volume grows beyond 500 rows.
F-09 — Audit trail for employee/supplier edits and sale reversals	Bundled with the next security-focused maintenance	Development team	Partially started this cycle (the modificado_por column); the rest needs its own design pass.

8. Lessons learned

Translating the interface (CR-02) took slightly longer than estimated because several hardcoded alert messages in JavaScript inline handlers were missed on the first review pass. Testing each file immediately after translation helped catch broken strings early and saved debugging time during final regression testing. For the next cycle, maintenance logs will be updated in real time during execution rather than compiled at the end.

Traducir la interfaz (CR-02) tomó un poco más de tiempo de lo estimado porque en la primera revisión se pasaron por alto varios mensajes de alerta integrados directamente (hardcoded) en los controladores dentro del código de JavaScript (inline handlers). Probar cada archivo inmediatamente después de la traducción ayudó a detectar textos rotos a tiempo y ahorró tiempo de depuración durante las pruebas finales de regresión. Para el próximo ciclo, la bitácora de mantenimiento se actualizará en tiempo real durante la ejecución, en lugar de compilarse al final.

Closure / Cierre

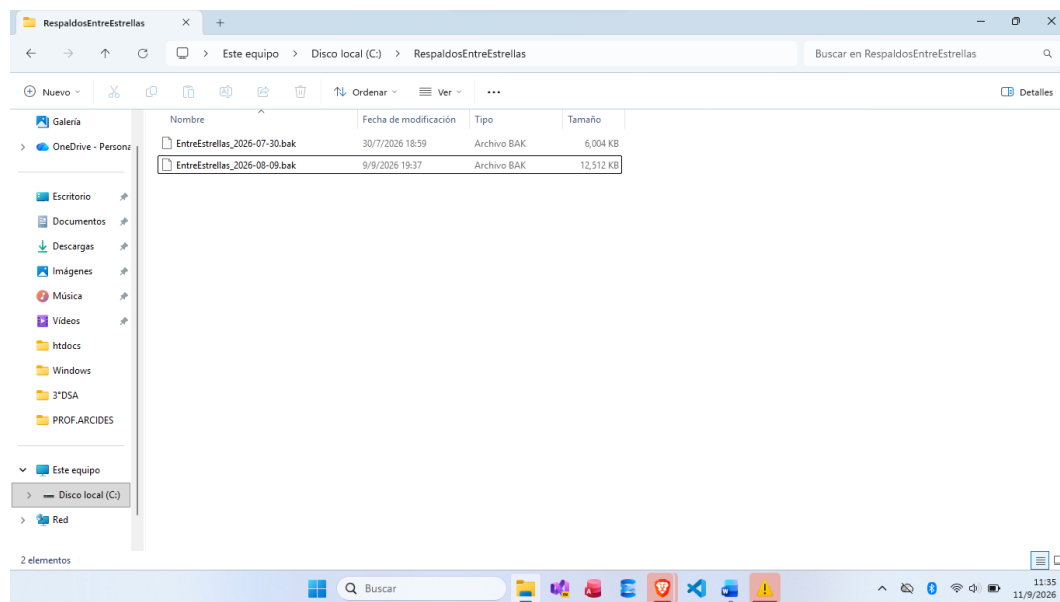

I declare that this maintenance was executed on my own working system, that the backups described were really created, that the results recorded — including the failures — are true, and that no password appears in this file.

Declaro que este mantenimiento se ejecutó sobre mi propio sistema en funcionamiento, que los respaldos descritos fueron realmente creados, que los resultados registrados —incluidas las fallas— son verdaderos y que en este expediente no aparece ninguna contraseña.

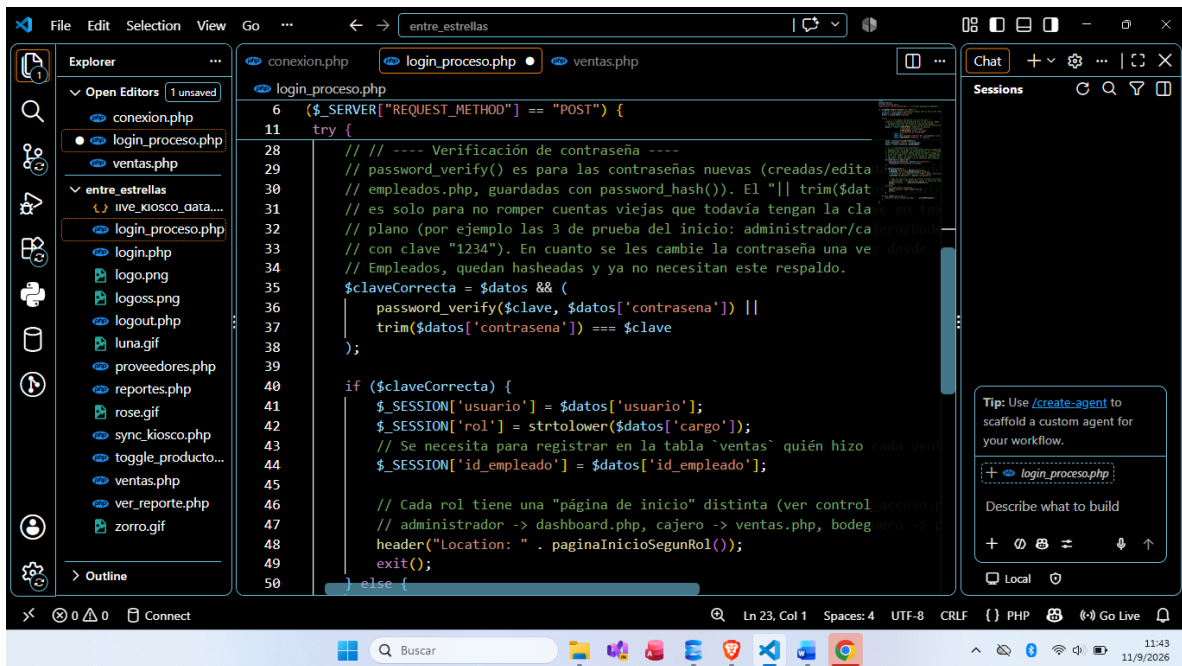

Attach: backup evidence, before and after screenshots, the scripts used, and the updated schema diagram.

Adjunte: evidencia de respaldos, capturas de antes y después, los scripts utilizados y el diagrama actualizado.

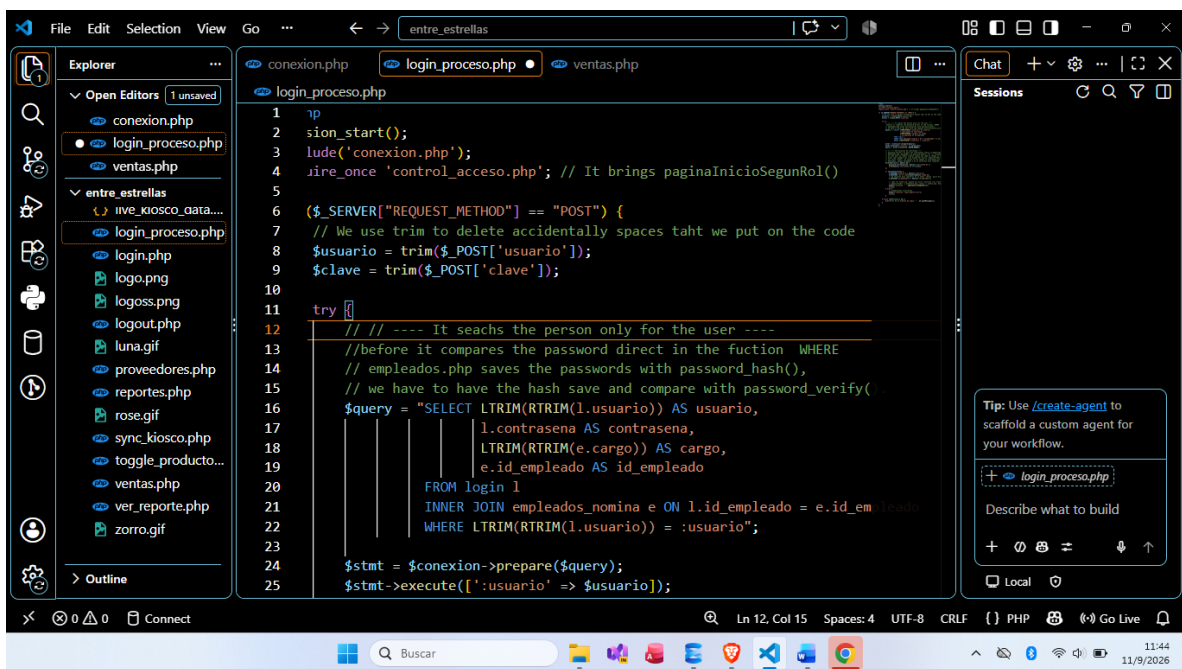

Captura 1: Respaldo del Sistema y Base de Datos (Pre-mantenimiento)

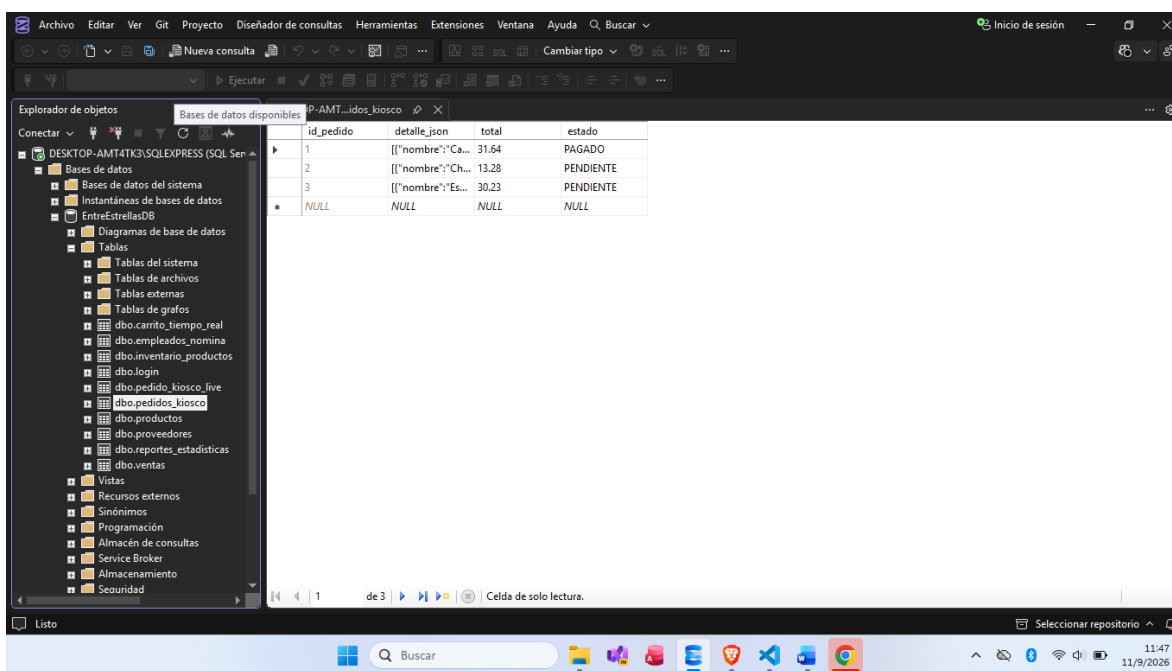

Captura 2: Control de Acceso (CR-01)

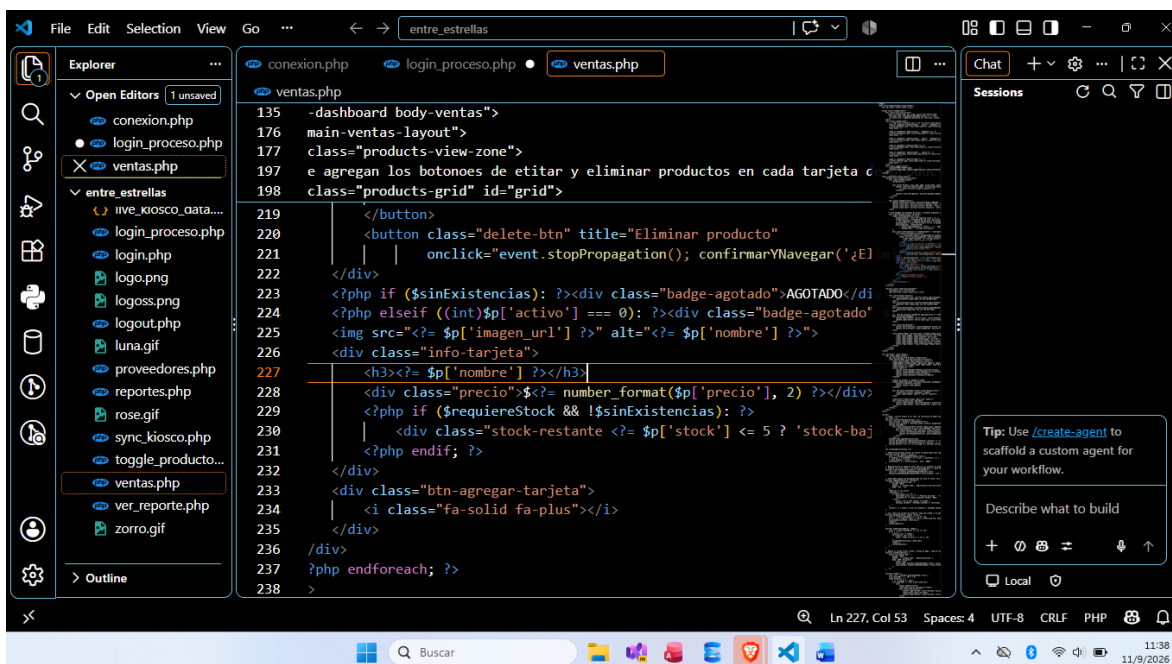

Captura 3: Traducción al Inglés (CR-02)

Captura 4: Lógica de Cancelación Automática de Pedidos - CR-03

Captura 5: Limpieza de Archivos de Imagen en Servidor - CR-04
