

THE COFFEE SHOP MAINTENANCE STORY: FIXING THE PEAK HOUR FREEZE

A dramatised presentation · Activity 06

Guion de la dramatización · Actividad 06

Team / Equipo	Entre Estrellas
System and client / Sistema y cliente	Cafeteria Management System for "Entre Estrellas" Coffee Shop
Format / Formato	Sociodrama — the client's week
Running time / Duración	10:00
Date / Fecha	2026-09-18
Teacher / Docente	Ing. Javier Arturo García Mineros

Format and cast

Why this format: We chose this sociodrama format because it allows us to clearly show the direct impact of system failures on our coffee shop customers during peak hours, creating a realistic interaction between the business owner and our software support team.

Elegimos este formato de sociodrama porque nos permite mostrar claramente el impacto directo de las fallas del sistema en los clientes de nuestra cafetería durante las horas pico, creando una interacción realista entre el dueño del negocio y nuestro equipo de soporte técnico.

Cast

STUDENT	CHARACTER	ROLE IN THE STORY	WHAT THIS CHARACTER WANTS
Valeria	María	Client / business owner	What this character wants: Wants the POS system to stop freezing during peak hours so she doesn't lose sales.
Marjory	Sofía	End user	What this character wants: Wants a fast checkout process without typing errors or long waiting lines.

Lissett	Lucía	Service manager	What this character wants: Wants to negotiate the maintenance window and manage scope without losing the client's trust.
Jazmín	Carlos	Lead technician	What this character wants: Wants to accurately diagnose the root cause (database indexing) and execute a safe patch.
Valeria	Mateo	Support officer	What this character wants: Wants to successfully train the user and hand over the updated system documentation.

Scene breakdown

#	SCENE HEADING	TIME	CHARACTERS ON STAGE	WHAT HAPPENS	[TECH] CONTENT DELIVERED
1	INT. COFFEE SHOP COUNTER — MONDAY, 8:00 A.M.	1:30	María & Sofía	The POS system freezes during peak morning hours, causing customer complaints and lost sales.	Symptom described by the user and business impact in money and time.
2	INT. COFFEE SHOP BACK OFFICE — MONDAY, 9:15 A.M.	2:00	María & Carlos	Technicians inspect database logs and identify the root cause behind the query delay.	Baseline metrics (18s delay), tools used, findings register, and severity.
3	INT. COFFEE SHOP TABLES — MONDAY, 10:30 A.M.	1:30	María & Lucía	The service manager presents the maintenance scope, time window, and costs to the owner.	Scope, exclusions, maintenance window, rollback plan, and client requirements.
4	INT. SERVER ROOM — MONDAY, 11:00 P.M. (WINDOW)	2:00	Carlos & Mateo	The technical team executes the backup, applies the index patch, and runs verification tests.	Verified backup and restore, database index change applied, and validation tests.
5	INT. COFFEE SHOP COUNTER — TUESDAY, 8:00 A.M.	1:30	María, Sofía & Mateo	The system is back online; support trains the staff and delivers release documents.	Before and after numbers (speed drop to 2s), release notes, and acceptance signature.

6	INT. COFFEE SHOP MANAGER OFFICE — TUESDAY, 9:00 A.M.	1:30	María & Lucía	Review of the preventive maintenance schedule, warranty details, and future checks.	Preventive schedule, deferred findings, system warranty, and next intervention date.

Script

Scene 1 — The complaint

SCENE 1 – THE COMPLAINT INT. COFFEE SHOP COUNTER – MONDAY, 8:00 A.M. (MARÍA stands behind the main counter, tapping the touchscreen anxiously while a long line of customers waits. SOFÍA holds a stack of empty cups.) MARÍA Carlos! The system froze again right in the middle of the morning rush! Three customers just left because they couldn't pay with their cards. SOFÍA Every time we try to search for a customer name, the screen stops responding for almost twenty seconds. This is unacceptable. ``[cite: 1]

Scene 2 — The diagnosis

SCENE 2 – THE DIAGNOSIS INT. COFFEE SHOP BACK OFFICE – MONDAY, 9:15 A.M. (CARLOS opens a laptop and connects it to the local database server. LUCÍA takes notes on her tablet.) CARLOS [TECH: baseline metric – transaction delay of 18 seconds, severity high] Good morning, María. Before we change anything, I checked the database performance logs. Watch the search query execution time... it takes nearly eighteen seconds. LUCÍA María, how many active users are querying the database simultaneously right now? MARÍA Four cashiers and the inventory manager downstairs. CARLOS That explains the concurrency peak, but the root cause is clear: the customer search field has no index, forcing a full table scan every single time. ``[cite: 1]

Scene 3 — The proposal

SCENE 3 – THE PROPOSAL INT. COFFEE SHOP TABLES – MONDAY, 10:30 A.M. (LUCÍA sits across from MARÍA, opening a printed service proposal binder on the table.) LUCÍA [TECH: scope, maintenance window, rollback plan] Based on our findings, we propose a two-hour maintenance window tonight at midnight to apply the database indexing patch. MARÍA Does this mean my data is safe? And how much will this intervention cost? LUCÍA Your data is completely safe. We will take a full verified backup beforehand, and we have a safe rollback plan ready if anything fails. This falls under your system warranty.

Scene 4 — The window

SCENE 4 – THE WINDOW INT. SERVER ROOM – MONDAY, 11:00 P.M. (CARLOS and MATEO stand in front of the server rack. CARLOS types commands rapidly while MATEO monitors the console logs.) CARLOS [TECH: backup restoration and code patch execution] Alright, let's start. First, executing full database backup... Backup verified and stored successfully. Now applying the non-clustered index on the customer table. MATEO Check the query execution time now, Carlos. Did the deadlock disappear? CARLOS Yes! The index query test passed successfully. Execution time dropped from eighteen seconds down to half a second. No rollback needed.

Scene 5 — The handover

SCENE 5 – THE HANDOVER INT. COFFEE SHOP COUNTER – TUESDAY, 8:00 A.M. (MATEO stands next to MARÍA at the counter, pointing to the screen and handing over a physical maintenance folder.) MATEO [TECH: before and after numbers, release notes, user instructions] Here are the release notes and the updated user manual. As you can see, the transaction search time dropped from eighteen seconds down to half a second. MARÍA Everything looks extremely fast now. Let me sign the acceptance handover form. MATEO Thank you, María. Remember to check the daily sync report every morning.

Scene 6 — The commitment

SCENE 6 – THE COMMITMENT INT. COFFEE SHOP MANAGER OFFICE – TUESDAY, 9:00 A.M. (LUCÍA and MARÍA sit across the desk reviewing a calendar document.) LUCÍA [TECH: preventive maintenance schedule, deferred findings, system warranty] To make sure this never happens again, we have scheduled preventive maintenance checks for the first Monday of every month. MARÍA What about the warranty on yesterday's patch? LUCÍA It includes a full thirty-day warranty and ongoing support. Here is the schedule for our next intervention. Thank you for trusting our team.

Pronunciation work list

WORD OR PHRASE	WHO SAYS IT	WHY IT IS DIFFICULT
Concurrency peak	Carlos	Complex consonant cluster pronunciation in "concurrency".
Rollback plan	Lucía	Linking the sound from "roll" to "back" fluently.
Non-clustered index	Carlos	Advanced technical phrasing with multiple syllables.
Maintenance window	Lucía	Pronouncing the diphthong in "maintenance" correctly.
Release notes	Mateo	Connecting the ending sound of "release" with "notes".

Version control: this is version 1. Version 2, corrected after the rehearsal, is delivered on Friday 11 September.
Esta es la versión 1. La versión 2, corregida tras el ensayo, se entrega el viernes 11 de septiembre.
