Activity 06 — Dramatised presentation · Day 2

Plan de diapositivas y hoja de sincronía

Team / Equipo	Entre Estrellas
Title / Título	The Coffee Shop Maintenance Story: Fixing the Peak Hour Freeze
Deck controller / Controla el deck	Sofía
Demo driver / Maneja la demo	Carlos
Slides / Diapositivas	12
Date / Fecha	2026-09-18

1. Slide plan

#	TITLE (STATEMENT, MAX 6 WORDS)	VISUAL CONTENT	SPEAKER NOTES IN ENGLISH
1	Entre Estrellas Coffee Shop Management System	Company logo, system name, team members, and roles.	Welcome everyone. Today we present how we maintained and secured the Entre Estrellas POS system under peak operational pressure.
2	A Busy Coffee Shop Depending On Tech	Photo of the coffee shop counter and daily customer flow statistics.	Our client María runs a busy coffee shop serving over two hundred customers every single morning.
3	POS System Architecture Overview	Screenshot of the main sales interface and technology stack diagram.	The system handles real-time sales, inventory updates, and customer name lookups during rush hours.

4	Peak Hours Caused System Freezing	User quote: "The screen stops responding for twenty seconds."	During the morning rush, concurrent searches caused severe freezing, leading to abandoned customer purchases.
5	Baseline Metrics Showed High Latency	Large numbers: 18 s search delay, 4 concurrent cashiers, high severity.	Our baseline performance test proved that transaction lookups averaged eighteen seconds under load.
6	Root Cause: Unindexed Search Fields	Three findings: unindexed customer field, full table scans, concurrency spike.	We separated the symptoms from the root cause: the database was executing full table scans due to a missing non-clustered index.
7	Targeted Maintenance Window Proposed	Scope, 2-hour window at midnight, cost, and explicit exclusions.	We proposed a safe midnight maintenance window to apply the patch without affecting daytime operations.
8	Safe Backup and Rollback Strategy	Diagram showing full backup verification and quick rollback steps.	To guarantee data integrity, we planned a full verified backup and established an immediate rollback procedure.
9	Incident Managed During the Window	Timeline of the midnight intervention and minor deadlock warning.	During execution, a minor concurrency deadlock occurred, but our monitoring tools resolved it instantly.
10	Performance Dropped to Half a Second	Before / After comparison: 18 seconds down to 0.5 seconds.	The transformation was dramatic: search latency dropped from eighteen seconds to half a second.
11	Handover Documents Delivered Successfully	Images of the release notes, user manual, and signed acceptance form.	We formally handed over updated documentation and trained the counter staff on best practices.
12	Preventive Schedule Ensures Long-Term Stability	Calendar showing monthly checks, 30-day warranty, and closing statement.	Stability is guaranteed through monthly preventive checks and ongoing support. Thank you.

2. Synchronisation sheet

Print this page. The deck controller holds it during the whole performance.
Imprima esta página: quien controla el deck la sostiene durante toda la función.

SCENE	SLIDE	WHO SPEAKS	WHAT IS ON SCREEN	CUE LINE FOR THE CHANGE
1 — The complaint	Slide 1 to 4	María & Sofía	Store photo and system crash quotation	"...the screen stops responding for almost twenty seconds."
2 — The diagnosis	Slide 5 & 6	Carlos & Lucía	Baseline metrics (18s) and unindexed field findings	"...the customer search field has no index."
3 — The proposal	Slide 7 & 8	Lucía & María	Maintenance window scope and backup strategy	"...we have a safe rollback plan ready."
4 — The window	Slide 9	Carlos & Mateo	Server room execution timeline and console logs	"...applying the non-clustered index on the customer table."
5 — The handover	Slide 10 & 11	Mateo & María	Before/After numbers (18s vs 0.5s) and release notes	"...let me sign the acceptance handover form."
6 — The commitment	Slide 12	Lucía & María	Preventive monthly schedule and warranty terms	"...thank you for trusting our team."
Live demo	Live System Window	Carlos	Running POS software demonstrating instant lookup	"...let me show you how fast it runs right now."

3. Live demonstration plan

3.1 Flow

1. Log in securely to the Entre Estrellas POS system using demo credentials. 2. Navigate to the customer lookup module. 3. Type a sample search query and show the instant response time (under 0.5 seconds).

1. Iniciar sesión de forma segura en el sistema POS con credenciales de prueba. 2. Navegar al módulo de búsqueda de clientes. 3. Escribir una consulta de búsqueda de ejemplo y mostrar el tiempo de respuesta instantáneo (menos de 0.5 segundos).

3.2 Demo data

We use a completely isolated sandbox database populated with fictitious customer names and generated coffee product sales to protect real user privacy.

Utilizamos una base de datos de pruebas completamente aislada, poblada con nombres de clientes ficticios y ventas de café generadas para proteger la privacidad de usuarios reales.

3.3 Plan B

If the live connection drops, Carlos will immediately switch to the pre-recorded HD video backup of the exact same transaction search flow stored in Tab 2 of the browser.

Si la conexión en vivo falla, Carlos cambiará inmediatamente al respaldo en video HD pregrabado del mismo flujo de búsqueda de transacciones ubicado en la pestaña 2 del navegador.
